TARGET:

Ecosystem for Innovation SAMOTRACE has the ambition to leverage the consolidated vocation of the Sicilian territory in the area of microelectronics e micro-and nano technologies to bring this to a higher and more diffuse level that can have a significant and tangible impact over the industrial scenario of the island and over the whole society.

The whole set of activities in fact builds around the fil rouge of micro-and nano technologies, microelectronics, materials, microsystems and devices, cumulating methodologies and applications toward six major areas such as: energy, health, smart mobility, environment, cultural heritage and smart agriculture. Therefore, the ambition and the vision that SAMOTRACE will have an impact well beyond the sole industrial perimeter. SAMOTRACE focuses on the European Commission global challenge “Digital, Industry & Space”, but it also addresses other challenges as “Health”, “Energy & Mobility”, “Agriculture & Environment”. As it will be detailed in the following, SAMOTRACE will operate in accordance with most of the “Global Sustainable Development Goals”: improving sustainable agriculture, ensuring healthy lives, achieving gender equality and inclusion, providing modern energy for all, promoting sustainable growth, supporting sustainable industrial growth.
